the march towards on line and blended teaching present before the covid 19 pandemic has been accelerated by it and there is no going back students and staff may object but the economic drive towards greater productivity will inevitably result in less face to face f2f instruction therefore it is incumbent for those delivering this precious in person resource to make maximum use of time which raises the question how the second edition of higher education computer science offers some potential answers it also addresses other questions such as why have f2f teaching at all what is the purpose of f2f and what is the appropriate balance between the two the first edition began to offer suggestions for optimising limited opportunities to get together with students aligned with that this unique new volume

examines how to use the technology available to maximum advantage for example resources such as moocs and other on line instructional materials can provide invaluable pedagogic support in addition the book addresses problem based learning using robotics in the teaching of programming and a multidisciplinary approach to data science although it includes a chapter on distance learning there is greater emphasis placed on the soft transferable skills and employability skills that are best delivered in person further the work provides several examples of putting theory into practice when teaching computer science at both undergraduate and postgraduate levels written by experienced practitioners each chapter tackles a particular teaching activity or topic within computing presented in such a way that other practitioners can use as such this new volume will be an invaluable resource to those who want to protect and optimise in person teaching
